If your total score is 5 or more, this means your breathing problems may be caused by chronic obstructive pulmonary disease (COPD). The higher your score, the more likely you are to have COPD. COPD is often referred to as chronic bronchitis and/or emphysema and is a serious lung disease that slowly gets worse over time. While COPD cannot be cured, it is treatable, so please share your answers to the five question screener with your healthcare professional (HCP).

If your total score is between 0 and 4, and you are experiencing problems with your breathing, please share your answers to the fivequestion screener with your HCP.

Only your HCP can decide if you have COPD. Your HCP can help evaluate your breathing problems by performing a breathing test, also known as spirometry. Don't wait. Call your HCP today to make an appointment to see if you may be at risk for COPD. Remember, when speaking to your HCP, be honest and open in describing your symptoms and explain how your breathing problems affect your activity level on a daily basis.

Note to Doctor/Healthcare Provider: The COPD Population Screener™ (COPD-PS™) is an easy-to-use, validated tool designed to identify patients at risk for

- The COPD-PS™ has been validated in a diverse population age 35 and older
- The five questions in the COPD-PS™, culled from a 52-question initial survey, were found to be the most likely to predict COPD
- The study's predictive value is 0.59 (AUC) with 88% of COPD cases correctly classified
- A clinical diagnosis of COPD should be confirmed with spirometry
- Please visit DRIVE4COPD.COM to learn more about this screener and its validation

About the score:

- Score 5-10 High risk of COPD
- Score 0-4 Low risk of COPD

The sole intent and purpose of this screener is to help create awareness within individuals about their risk of COPD
